

Solutions Architect

Job Description

Paragon Application Systems is currently seeking an experienced Solution Architect. This person will join a team of outstanding individuals that is responsible for designing, coding, testing and implementing Paragon's desktop products.

At Paragon there is a very short, straight line between each individual's efforts and the success of the company. We are looking for high integrity self-starters who thrive on being in an environment in which they can have a significant impact.

Essential Duties and Responsibilities

- Analyze technical specifications in order to identify changes required in Paragon products
- Code and test software updates and enhancements
- Work with customers to resolve technical issues in a timely manner
- Manage implementations of Paragon products
- Provide consulting services to Paragon customers to help them improve their quality assurance processes and procedures
- Identify and recommend "best practices" in order to maximize the efficiency and effectiveness of the team
- Participate in "daily scrum" meetings with fellow team members
- Other tasks as required

Essential Skills and Experience:

- Self starter
- Able to work in a collaborative team environment
- Strong knowledge of automated teller machines (ATMs)
- 3-5 years VB.Net programming experience
- Strong time management and organizational skills

Highly Desirable Skills and Experience:

- Working knowledge of ISO 8583 message formats
- Familiar with lean/Agile development methodologies
- At least 1 year Java programming experience
- Working knowledge of CEN/XFS specification
