

## **Paragon Application Systems Announces Complete End-to-End Testing Solutions for Financial Transactions**

*Paragon's desktop ATM, EFT, and POS Simulation and testing tools provide integrated end-to-end testing*

(Holly Springs, NC—November 15, 2005) Paragon Application Systems, the leading global provider of automated teller machine (ATM), electronic funds transfer (EFT), and point of sale (POS) configuration, simulation and testing software, announces the integration of its ATM, EFT, and POS simulation and testing tools to provide complete end-to-end testing of financial transactions. The integrated tools will enable customers to simulate virtually any financial transaction, from ATM to POS, conduct complete regression testing, and determine how their systems will handle varying transaction volumes from multiple sources.

Financial institutions have no tolerance for production errors. By testing early and often with a comprehensive testing program using Paragon's tools, financial institutions can locate and fix problems before they occur in production and increase reliability when they introduce new products or make changes to their systems.

Paragon provides test cases tailored specifically for more than 60 ATM, POS and EFT financial message formats that users can execute from their desktop with a few mouse clicks. To make testing comprehensive, Paragon integrates every step from unit testing—to integration and regression testing—to performance testing. Paragon will demonstrate their complete end-to-end testing solutions at BAI's Retail Delivery Conference and Expo (booth 2261) from November 15-18 in Orlando, Florida.

"The financial industry has zero tolerance for errors," says Kathryn Cameron, Director of Sales for Paragon Application Systems. "Customers count on quick, accurate financial transactions. The only way to avoid errors is testing, testing and more testing. Paragon's business is to provide the solutions to make it easier to do more comprehensive testing—more often."

### **About Paragon Application Systems**

Paragon Application Systems is the leading global provider of ATM, EFT and POS simulation, configuration and testing software tools to the financial industry. More than 350 financial institutions in over 60 countries use Paragon tools to improve quality, and reduce time-to-market. Paragon's broad customer base includes major interchanges, leading software providers, banks and credit unions. Visit Paragon Application Systems at [www.paragonedge.com](http://www.paragonedge.com).
