What ParagonEdge OnDemand Can Do For You...

■ Centralize Testing Infrastructure

Increase testing efficiency with a common, shared testing platform.

■ Test On-Demand

Test anywhere, at anytime of day.

■ Bring Together Global Resources

Easily share test cases and view testing progress.

■ Automatic Updates

Get the latest network mandates and software updates.

■ Access a Test Script Library

Easily obtain the test scripts you need.

■ Keep Tests Secure

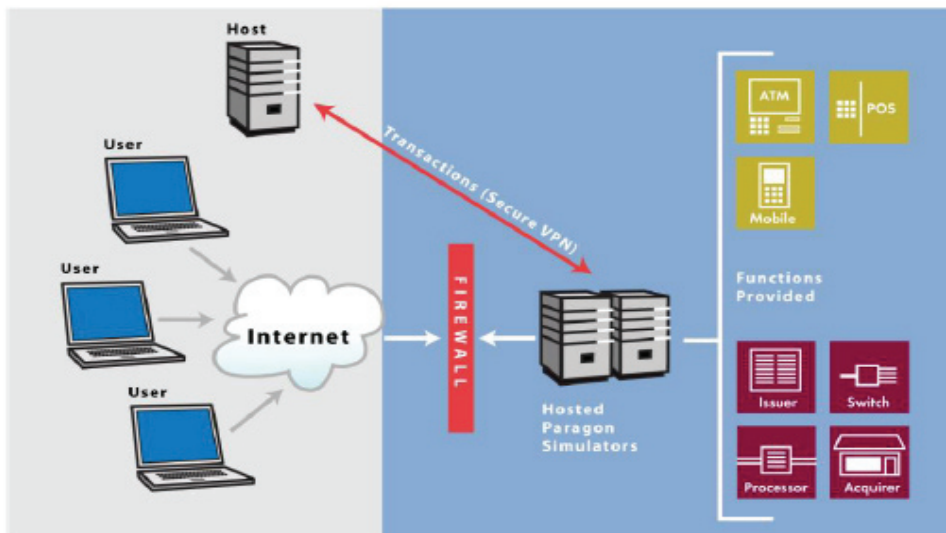

Transactions travel over a secure VPN connection.

Enhance Testing Performance with a Centralized ePayment Testing Platform in the Cloud

Too often ePayment system projects are delayed due to the instability of testing systems. Coordinating global resources and test systems is time consuming and often leads to missed deadlines and budget overruns. Development and Quality Assurance personnel are using testing applications that are not in sync—let alone up to date. Test practices vary across departments which can lead to inconsistent results. Moving the testing infrastructure to the cloud helps eliminate these inefficiencies.

ParagonEdge OnDemand is a secure, cloud-based solution for ePayments testing that lets your users test anytime, anywhere—using the Internet or your Intranet. ParagonEdge OnDemand provides a flexible, continuously updated software testing platform. Control what your pre-certification and QA users test or allow your developers to define their own testing schemes. Improve collaboration by allowing users to share test data and results across the organization. Since the service is centralized, testing progress can be monitored across the user base. Let Paragon maintain and update your ePayments testing environment so you can focus on moving product to market—quickly and reliably.

Paragon Edge OnDemand Testing Environment

Check us out online at WWW.PARAGONEDGE.COM

Centralize Test Management

You control the tests that your users perform. Need to test a mandate or new transaction? Modify your tests and make them immediately available to all of your users—regardless of geographical location or time zone. Customize tests for specific users or create generic tests for multiple users. Improve testing performance by ensuring that your users are conducting the right tests at the right time.

Customize ParagonEdge OnDemand for QA, Developers, or Pre-Certification

ParagonEdge OnDemand can be customized to meet your organization's specific needs. Development departments can create function tests to use as they are developing code. QA departments can use ParagonEdge OnDemand's regression testing to make sure that code is ready to go into production. Pre-certification groups are able to easily create and lock-down scripts for on-line pre-certification testing.

Offer On-Demand Testing to Multiple Users at Multiple Sites

Multiple users at multiple sites now are able to test anywhere, anytime, 24/7, using ParagonEdge OnDemand. Secure connections and passwords keep access restricted to authorized users. Access libraries of targeted test scripts and saved test data. Leverage Paragon's ePayment testing expertise to optimize testing.

Enjoy Maintenance-Free Testing

Paragon updates the testing environment with the latest software patches and upgrades so your test team is always using the latest software—without having to perform any system maintenance. Work faster and smarter so you can promote changes into production earlier.

Generate Timely Test Reports

View test results in a variety of ways, from high-level compiled progress reports to detailed test documentation required for regulatory compliance. View test results by user ID and other criteria, including terminal ID or merchant ID. Easily monitor testing progress by user or group.

Scale your Testing Based on Your Needs

Dynamically manage ParagonEdge OnDemand as your ePayment testing needs change. Vary the number of users who have access to the system and the number of tests performed. Access different financial message formats and test scripts.

Access a Secure Testing Environment

Transactions between ParagonEdge OnDemand and your host system travel over a secure VPN connection. All testing data is secured for access by authorized personnel only.

ParagonEdge OnDemand:

- Provides on-demand testing—24/7 for all of your users
