Configbuilder™

ATM Configuration and Testing: Realistic and Accurate

Making and testing design changes to your Diebold, NCR or Wincor ATMs can be risky and time consuming. Paragon's ConfigBuilder™ is a Windows®-based graphical development tool that allows you to easily create, test and maintain ATM configuration files and to create load files—the files that control the displays that banking customers see at your ATMs.

Easily Design and Test ATM Configuration Files From Your PC

- Use 'point and click' technology to quickly design and test ATM configuration files
- Brand ATMs with screen designs incorporating audio, graphics, HTML and multiple languages
- Simulate the customer process for each transaction before changing your configuration files
- Create a load file tailored to your existing terminal-driving software

Accelerate Implementation of Advanced ATM functions (EMV Chip Cards, Multi-Currency, Envelope-Free Deposits and Text-to-Speech)

- Quickly configure and test EMV chip cards, multi-currency dispenses, non-currency dispenses, cash-accepting terminals and envelope-free check deposits with check images printed on the receipt
- Add text-to-speech or audio files to the ATM configuration for visually impaired users
- Streamline ATM modifications to simply and economically comply with the Americans with Dis abilities Act (ADA) guidelines

Reduce Re-Work and Streamline Configuration Files

- Confirm ATM load files are correct by reviewing them at your PC before uploading them to the ATM
- Document the entire transaction flow, including thumbnails of ATM screens
- Easily find and delete unused screens and states with ConfigBuilder's Cross Reference utility

Update ATM Graphics Remotely

- Use ConfigBuilder to add URL calls to configuration files for Diebold or Wincor ProCash DDC Windows®-based ATMs
- The ATM automatically pulls the screen associated with the URL from graphics stored on the bank's local web server
- Refresh messages by replacing graphics on the bank's web server

ConfigBuilder is part of Paragon's Suite of ATM simulation, configuration and testing solutions including ATMulator Plus™, ConfigBuilder™, and FASTest™.
